ARS in Well-Being Measurement

Purpose in Life (PL)

Q33

Please say how much you agree or disagree with each of the following statements. (Mark (X) one box for each line.)

	Strongly disagree	Some what disagree	Slightly disagree	Slightly agree	Some what agree	Strongly agree
I enjoy making plans for the future and working to make them a reality.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
My daily activities often seem trivial and unimportant to me.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I am an active person in carrying out the plans I set for myself.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I don't have a good sense of what it is I'm trying to accomplish in life.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I sometimes feel as if I've done all there is to do in life.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I live life one day at a time and don't really think about the future.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I have a sense of direction and purpose in my life.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

ARS in Well-Being Measurement

“The tendency to agree with questionnaire items regardless of the content (yea-saying)”

-Lechner et al., 2019

ARS as a measurement problem

Numerous reports about the consequences of ARS:

- Loss of construct validity (e.g., Cronbach, 1946)
- Incoherence in associations (e.g., Danner, Aichholzer, & Rammstedt, 2015)
- Incoherence in factor structure (e.g., Rammstedt & Farmer, 2013)
- Subpopulation comparison inadequacy (Reynolds & Smith, 2010)
- Inadequacy of statistical inference tests (Roberts, 2016)

ARS and balanced scales

A commonly proposed solution to this problem is using 'balanced scales'

Q33

Please say how much you agree or disagree with each of the following statements. (Mark (X) one box for each line.)

	Strongly disagree	Some what disagree	Slightly disagree	Slightly agree	Some what agree	Strongly agree
I enjoy making plans for the future and working to make them a reality.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
My daily activities often seem trivial and unimportant to me.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

ARS and balanced scales

Debate around balanced scales:

Against:

- Loss of reliability
- Reversed item can have a different meaning

Pro:

- Increased criterion validity
- Better factor structure

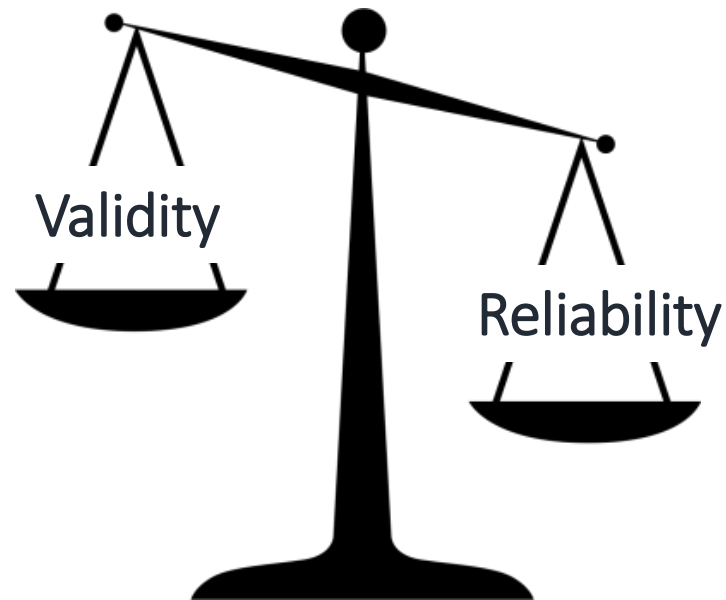

To balance or not to balance?

There is no clear consensus!

To balance or not to balance?

There is no clear consensus!

Our approach: **Trade-off**

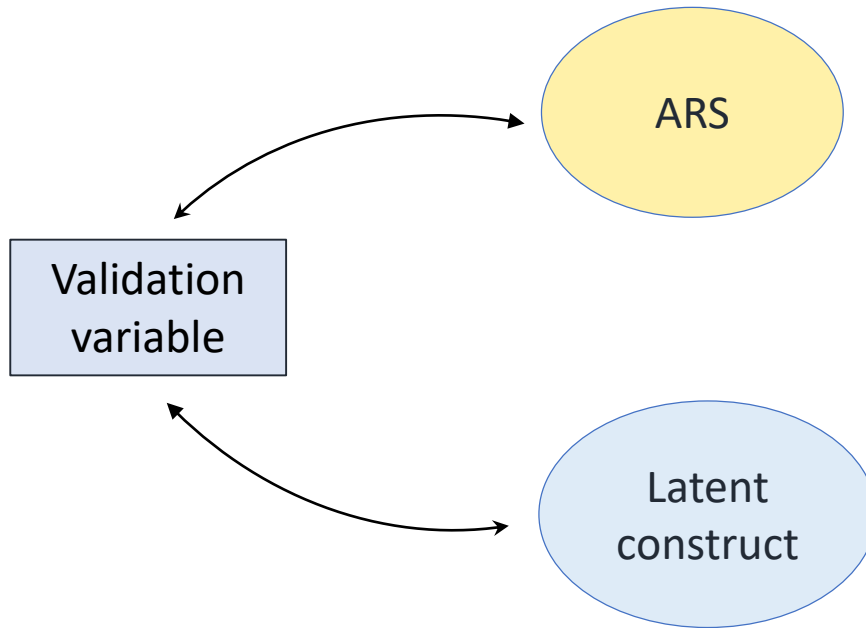

Simulation study

Main experimental factor: **balancing of the scale**

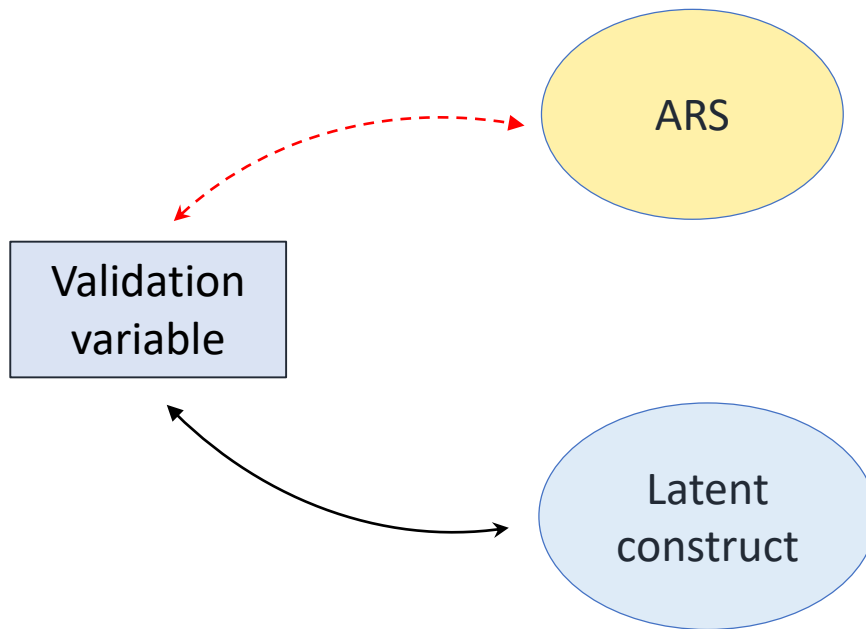

Main outcome of interest: Criterion and construct validity
(prior ARS modeling)

Sample size: 5,000

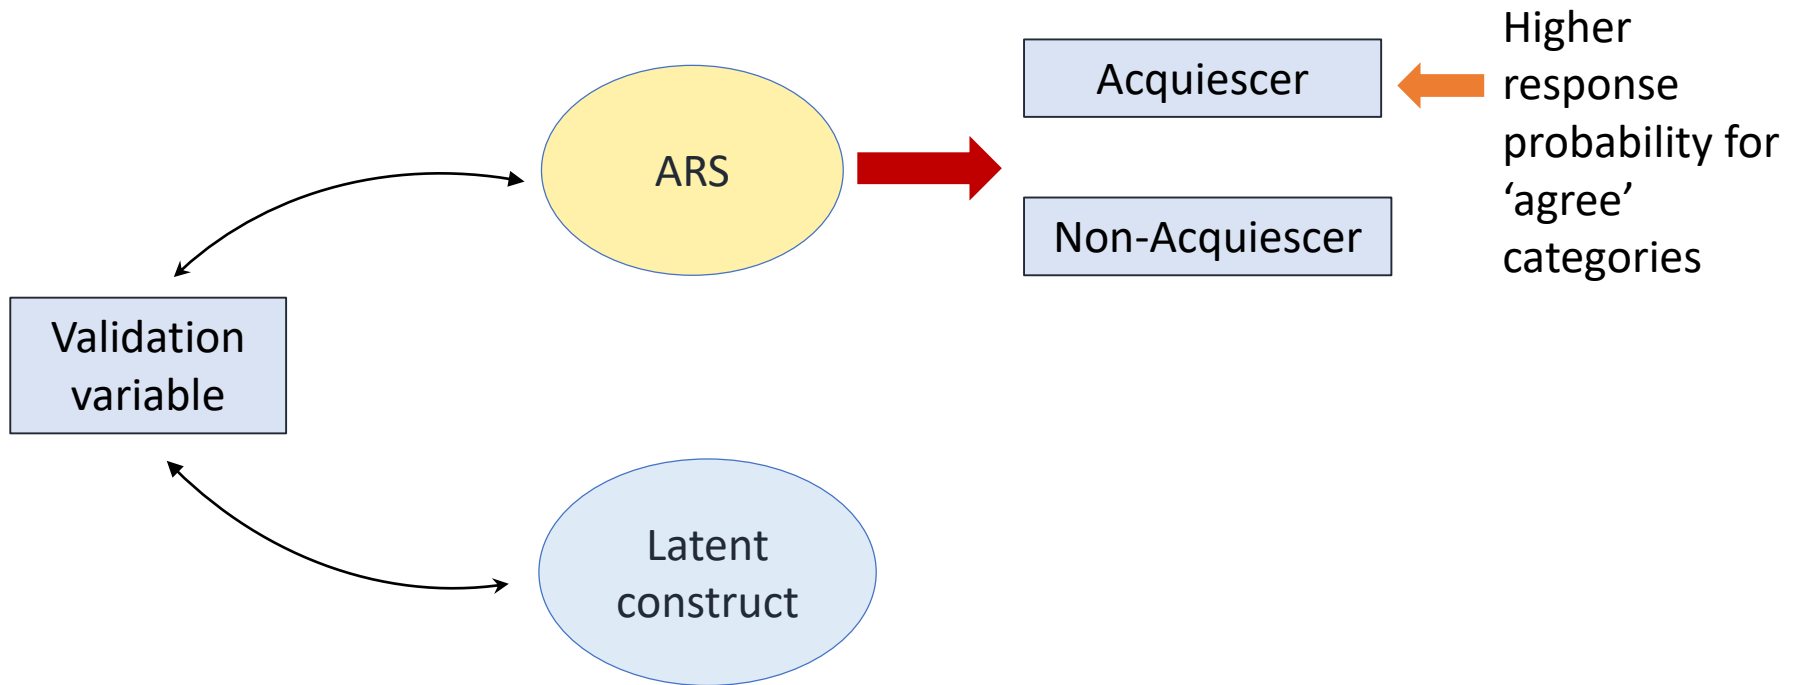

Data generating process

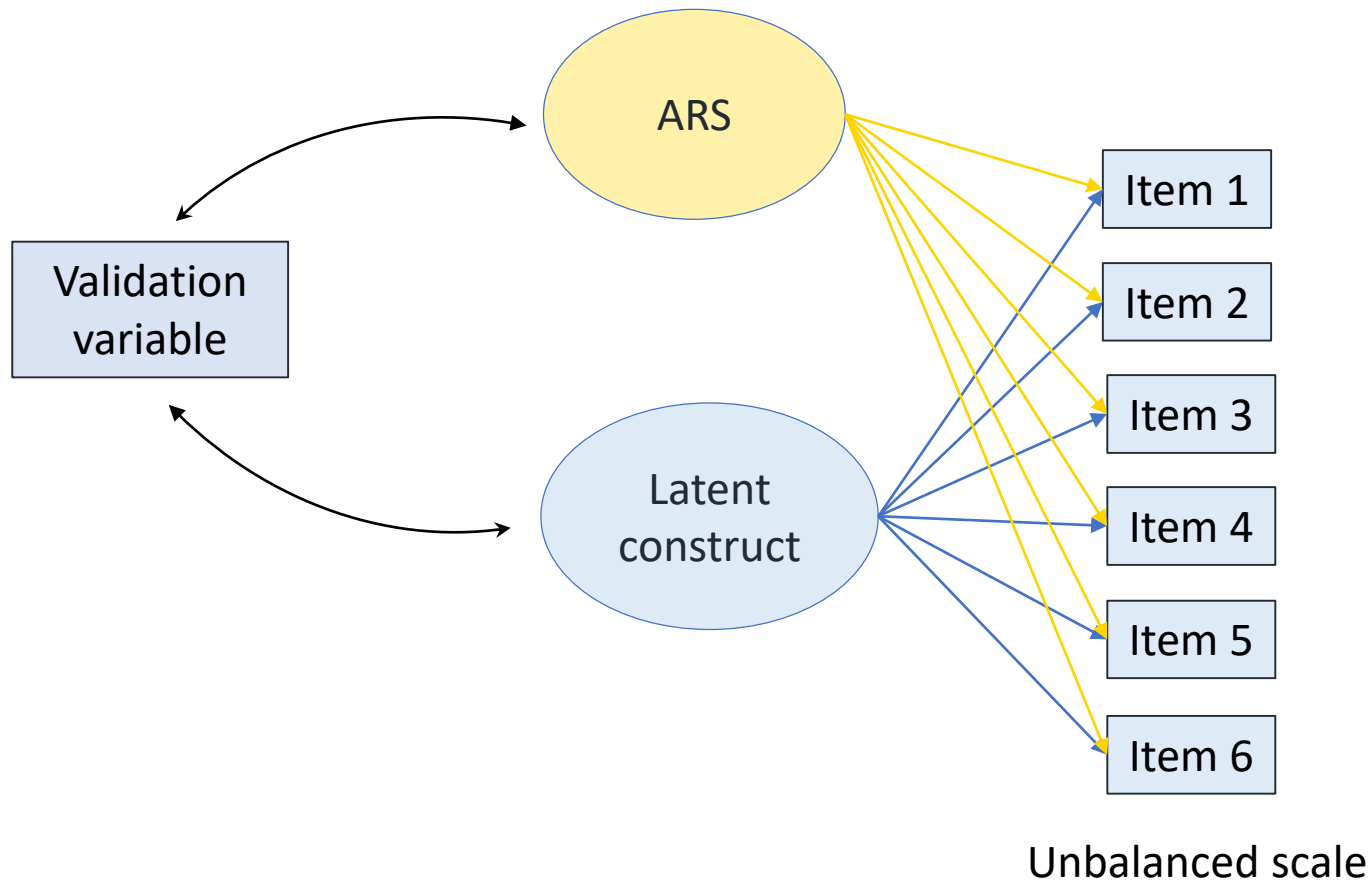

Data generating process

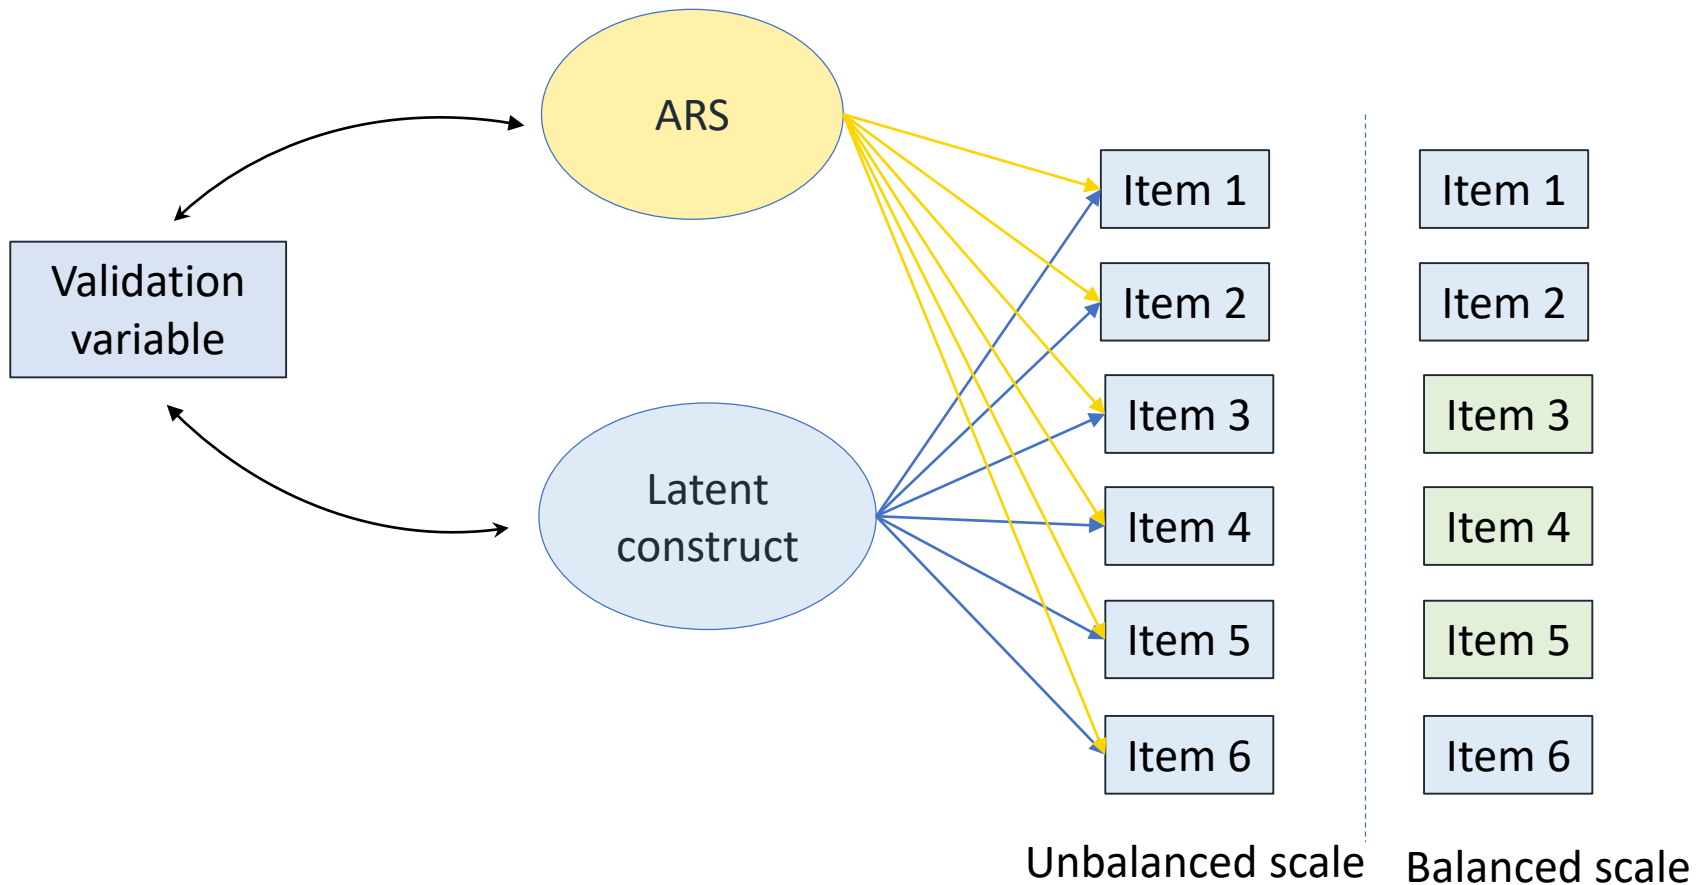

Data generating process

Data generating process

Data generating process

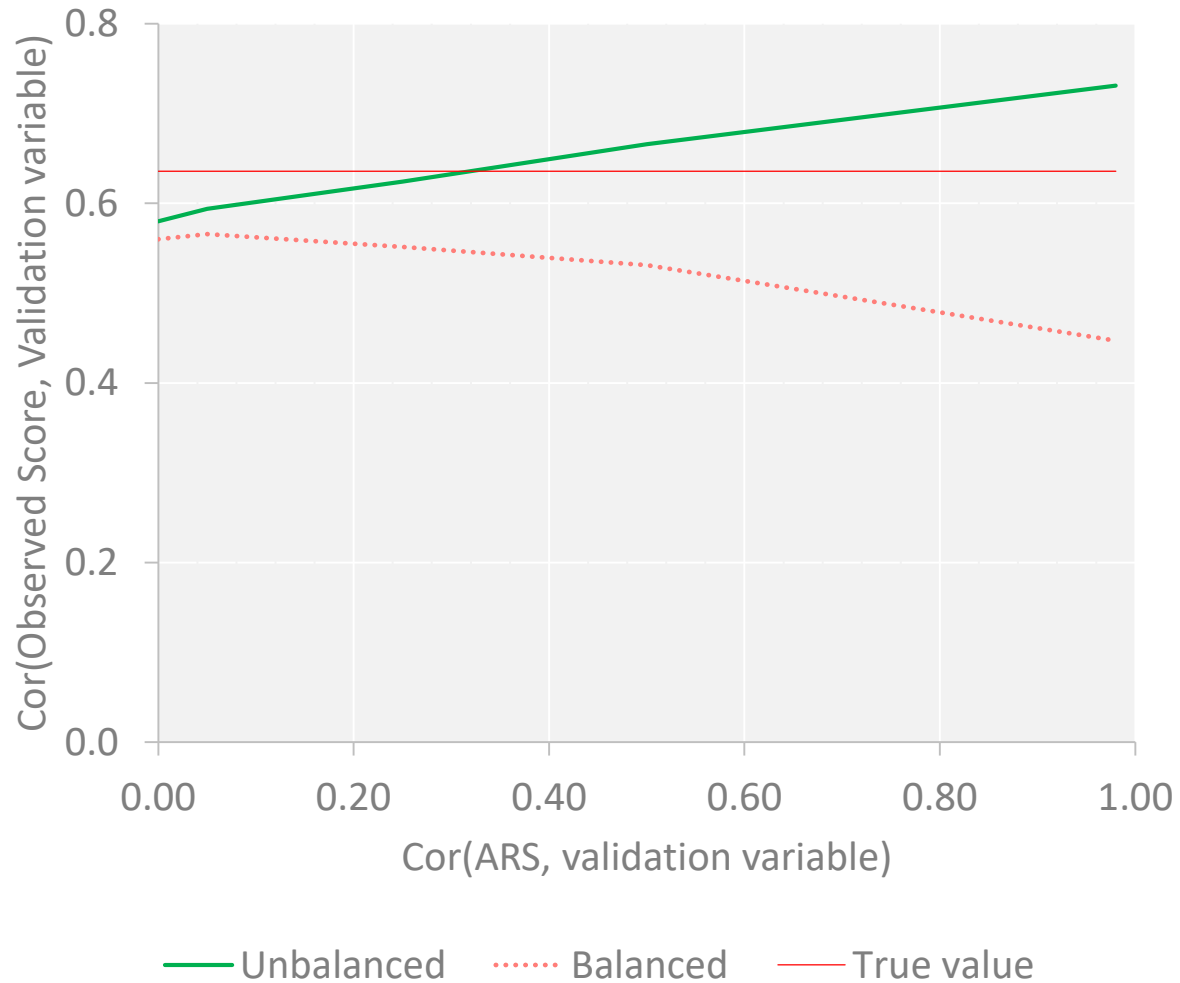

Evaluation criteria

- **Reliability** (Cronbach's alpha of trait scores)
- **Construct validity** (Correlation between latent score and observed scores)
- **Criterion validity** (Correlation between validation variable and observed scores)
- **Other consequences** (Observed score means, CFA fit measures)

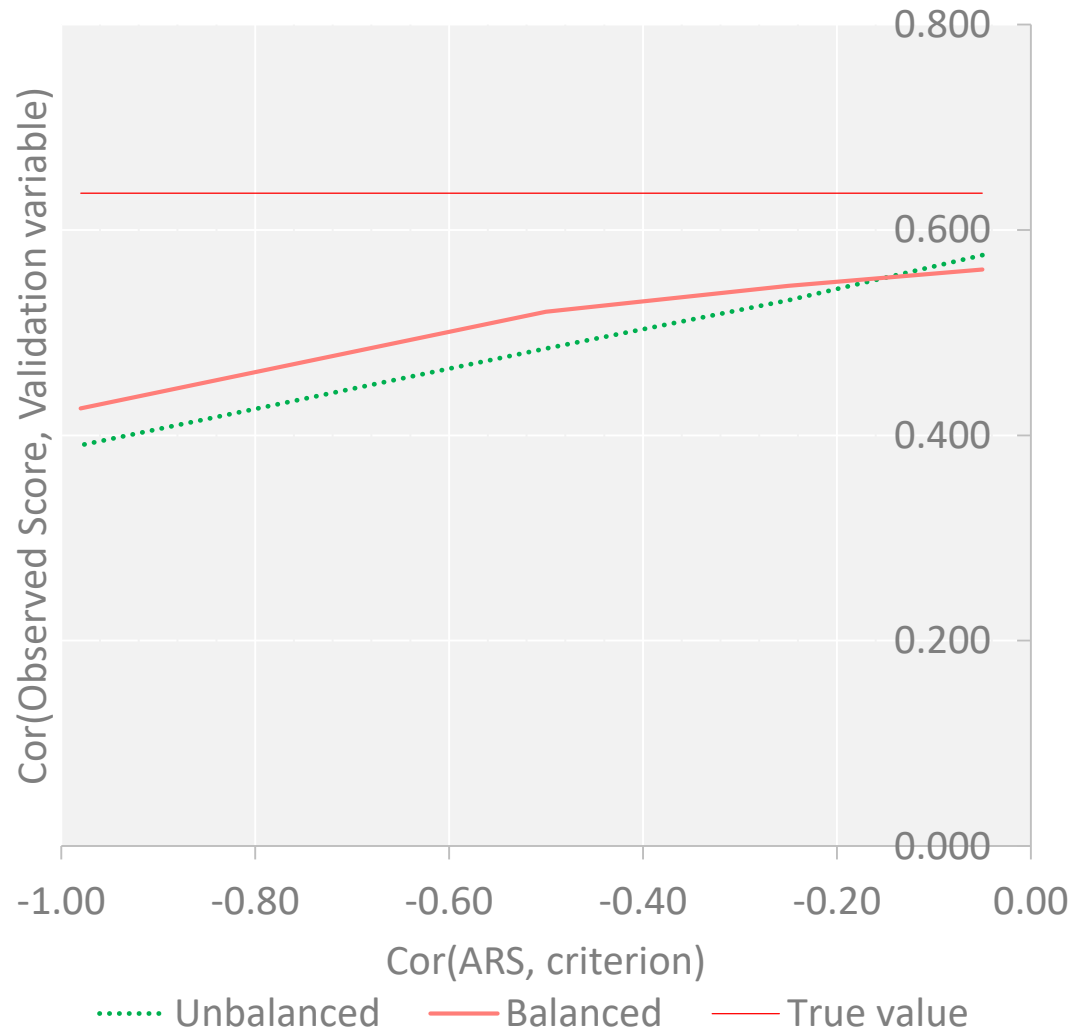

Results – Construct validity (Observed vs. latent scores)

Results – Criterion validity (Observed scores vs. Validation variable)

Results – Criterion validity (Observed scores vs. Validation variable)

Results – Other consequences

Results – Other consequences

Confirmatory Factor Analysis Fit measures - CFI

Results – Other consequences

Linear regression coefficient

Results – Other consequences

Mean of Observed scores

Conclusions

To balance or not to balance?

Conclusions

To balance or not to balance?

Depends on the analysis plan!

Conclusions

To balance or not to balance?

Depends on the analysis plan!

- If interested in means of scores: YES!
 - It helps reduce error but not eliminate it completely
- If interested in correlational analysis: Maybe?
 - Depends how ARS is correlated to the variables of interested (e.g, no correlation, negative correlation)

Future work

- Can we utilize the information coming from balanced scales (e.g., incongruent responses to oppositely worded items) to correct scores?
- Empirically, what is the ‘optimal’ way to reverse verbal stems?

Thank you!
